TRUSTEES' REPORT.

To His Excellency the Governor and the Honorable Council.

The trustees of the Worcester Lunatic Hospital respectfully submit their sixtieth annual report, it being for the year ending Sept. 30, 1892. With it, and as a part of it, they present also the annual reports to the Board, covering the same period, of the treasurer and superintendent, together with the usually forwarded tabular statements; and to these accompanying documents they beg leave to refer any who may be looking for particular and detailed information concerning the operations and results of the year.

In general terms it may be said that the year just closed has been prosperous and successful, and that the service rendered the State has been greater and more valuable than in any corresponding period in the history of the institution.

The statement of the treasurer will be found in all respects satisfactory. It shows that the expenditures for the year have been kept within the receipts, and that the very moderate surplus which it has long been the policy of this Board to maintain, and upon which it relies to meet emergencies and to take advantage of the markets in the purchase of supplies, has been kept up. It shows also that the loan made to the asylum, and mentioned in the last annual report, has been repaid.

The general health of the inmates has been good. There has been little serious sickness, and no epidemic disease. Deaths, of which there have been ninety-eight, have been all, or nearly all, due to causes inherent in the peculiar nature of the malady which originally brought the patients to the hospital.

Good order and correct discipline have prevailed in all departments. Officers and employees in all the various grades of service have been faithful to their duty. Dr.

Quinby, the superintendent, has especially discharged the onerous and oftentimes difficult duties of his position in a manner to deserve and receive the warmest commendation.

Subjects, which the experience of the year has particularly forced upon the consideration of the trustees and superintendent, and which they desire now to bring to the attention of the government, are the crowded condition of the hospital, involving the necessity of devising some measures of relief, and the inadequacy and disrepair of the plumbing in many of the wards, involving the question of some extensive alterations and repairs. The building was originally designed to accommodate four hundred patients. This was the estimate and understanding upon which the plans were approved and accepted by the governor and council, and it was to the accommodation of that number, properly distributed through the wards, that all its arrangements were adapted. Subscquently, however, to the adoption of the plans, there have been added at different times accommodations for two hundred more, by finishing off the attics and building Hooper and Gage halls, so that its proper normal capacity has been brought up to about six hundred. It can accommodate by using rooms originally intended for other purposes, and by putting here and there two patients into space designed for but one, six hundred and fifty, but with this number, which is the maximum of its normal capacity, it is fuller than is desirable or really wise. With any number beyond six hundred and fifty, crowding and discomfort begin, and every department of the management suffers. the condition which has prevailed during the past year. smallest number of patients in the house upon any one day has exceeded the maximum normal capacity by one hundred and sixty-seven, while the largest has exceeded it by two hundred and eighty-three. The daily average for the year has exceeded it by two hundred and seven. The number of patients under treatment has been greater by fifty-seven than in any previous year. Such crowding is exceedingly unfavorable in its effect upon the treatment and comfort and care of individual patients, and is in all respects unwise. strain upon any appliance, adjusted to the doing of a fixed amount of service, if the service required of it be pushed continually much beyond that amount, is injurious and may

be ruinous. And so here, kitchen, laundry, bakery, plumbing arrangements, etc., being called upon month after month for service very much beyond that for which they were intended, suffer, wear out and fall rapidly into disrepair. Thus, in particular, with the overcrowding, the plumbing of the hospital — water-closets, lavatories, bath-rooms and hotwater arrangements — has proved inadequate, and become so exceedingly worn as to require extensive and costly repair.

The superintendent of the hospital, Dr. Quinby, has given this state of affairs a great deal of study and consideration, and has suggested in his accompanying report some measures which commend themselves very strongly to the favorable opinion of the trustees, and which they are quite desirous of carrying into effect. His plans contemplate first, the erection of a farm building with suitable accommodations for fifty men, to be occupied by patients who regularly work upon the farm, and who require only a minimum of supervision Such a building would of course afford relief and restraint. to the crowded wards to the extent of the number for which it would provide, and would be in this respect a valuable addition to the facilities of the hospital. But it would be also an interesting experiment, taking a considerable number of able-bodied insane men out of the immediate custody of hospital walls, and giving them steady employment, with comparative freedom from restraint, as farm laborers, and would seem in this view even more desirable and attractive.

Dr. Quinby's second suggestion is with relation to alterations and repairs made necessary by the excessive wear and tear of the plumbing; and here he proposes moving the arrangements from their present position in the Phillips, Lincoln, Salisbury and Washburn wards, to new buildings connected with but slightly detached from the present at the rear, and so constructing these additions as to obtain not only larger accommodations but in all respects a better and more adequate system.

In any view these plans and suggestions appear worthy of consideration and trial, and as such are recommended by the Board to the Legislature. For more complete information concerning them, and for an estimate of their cost, reference is respectfully made to Dr. Quinby's report. To carry them

out the trustees will ask for an appropriation by the State; and for such appropriation they will ask with all the greater confidence of having it granted, from the fact that they have never since the occupancy of the new buildings, a period of fifteen years, received any aid of this kind from the Commonwealth, although they have without such assistance kept the hospital in excellent repair, and added immensely, not only to its facilities for the reception and care of patients, but to the property of the State.

It is agreeable, after the lapse of thirteen years, to refer again to the hospital library, to the establishment of which in 1879 the trustees set apart permanently the Wheeler and Lewis funds. That foundation has been a great success. The income of the funds supplies abundant and acceptable additions to the library every year, and there are now more than 2,500 well-selected books, 159 new volumes having been added during the past year. That this library is used and appreciated may be inferred from the fact that since Oct. 1, 1891, 6,295 books have been loaned to patients and employees.

Since the last report Dr. Clarence W. Pelton, assistant physician, resigned that office to pursue his professional studies abroad, and the announcement is made with regret that his health failed him while in London, and that though he was able to reach home he lived but a short time after. He was a faithful and intelligent officer. His place here was filled by the appointment of Dr. Lyman A. Jones. Dr. Frederick H. Daniels, also, whose service as assistant physician for several years has been highly regarded, resigned a short time since. His place has not yet been filled. With these exceptions, the official force of the hospital remains as at the close of the last year.

Respectfully submitted,

ALBERT WOOD,

Treasurer.

Ост. 1, 1892.

Worcester, Mass., Oct. 21, 1892.

The undersigned has carefully compared the treasurer's statement of expenditures for the year ending Sept. 30, 1892, with the vouchers which are on file at the hospital, also the statement of receipts with the estimated earnings, and found them to be correct. He has inspected the securities for the invested funds, and found them to correspond with the treasurer's statement of their market value; and he has compared the statement of expenditures in the land account with the vouchers, and found it correct.

GEORGE L. CLARK,

Auditor of Accounts.

SUPERINTENDENT'S REPORT.

To the Trustees of the Worcester Lunatic Hospital.

I have the honor to submit the following report of the hospital for the year ending Sept. 30, 1892, it being the sixtieth annual report.

There remained at the hospital Oct. 1, 1891, 825 patients, —393 men and 432 women; 342 men and 288 women were discharged and 58 men and 40 women died, leaving at the end of the official year 891 patients, —434 men and 457 women. Of this number, 321 were supported by the State, 417 by cities and towns and 153 by friends. Of the 466 discharged, 129, including 38 habitual drunkards, were reported recovered, 72 much improved, 104 improved and 161 not improved. One hundred and sixteen men and 89 women were removed by the overseers of the poor; 59 men and 62 women were transferred to other institutions; 42 men and 38 women were removed from the State; 8 women were boarded out; one man was returned to prison; and 13 men and 2 women escaped.

Our smallest number of patients was 817, and the largest number 933. During the month of August the average number was 912.21, while the daily average for the year was 857.36. It will be seen, therefore, that the crowded condition of the hospital not only continues, but that it has greatly increased within the past twelve months, there being 66 more patients in the house at the close than at the beginning of the year. As all the institutions in the State are in a like crowded condition, and there are still patients who must be provided for, we should hardly be justified, were we in a position to do so, in closing our doors to applicants as long as there is any available space left in the hospital in which to lodge them. There is a limit,

however, to the capacity of every institution, beyond which it is impossible to go, whatever the necessity; and I am sure that that limit has been reached during the past year in the case of this institution. In planning these buildings, a liberal space was set apart in connection with the wards for work-rooms and rooms for reading and recreation, and it is only by diverting these rooms from the purpose for which they were designed, and turning them into dormitories, that we are able to care for a number of patients so largely in excess of our estimated capacity; but, while we can thus lodge, more or less comfortably, from 900 to 925 patients, it is quite another matter to feed them. Our kitchen and bakery were designed to meet the wants of 650 inmates, together with the necessary attendants, and it is only with the greatest difficulty that this department is able to meet the demands made upon it, now that it has over a thousand mouths to fill. With our present kitchen facilities we certainly cannot cook for any greater number of patients, and it is impossible to enlarge this department without rebuilding it.

During the year the movement of our population has been unusually rapid, as both the admissions and the discharges have been largely in excess of any previous year. The percentage of recoveries, 22.65, calculated on the discharges, including deaths, is about the same as in former years, and is, perhaps, if not as large as might be wished, all that could be expected when we take into consideration the character of the admissions, 20 per cent. of whom had had previous attacks of insanity and had already been inmates of one or more institutions; while 30 per cent. of those suffering from a first attack had been insane one year or more before coming to the hospital. In many of these cases the insanity was complicated with grave physical disorders, such as epilepsy and paralysis,—disorders which would preclude from the first our entertaining any reasonable hope of the patient's recovery.

It may be of interest, perhaps, to call attention to the fact that in 30 of the cases committed to the hospital during the past year, the assigned cause of insanity was "La Grippe," and that 19 of these cases were discharged, 6 as

recovered, 2 as much improved, 3 as improved, and 4 not improved; 4 died, and 11 remained in the hospital at the close of the year.

We have again enjoyed immunity from serious accident and from all infectious and contagious diseases, and there has been but little sickness of an acute nature through the year. The death rate has been 11.5 per cent, calculated on the daily average number of patients, and 6.73 per cent.. calculated on the whole number under treatment. somewhat larger than for several years past, but is not excessive, considering the age and condition of the patients at the time of their death. Twenty-one were between seventy and eighty, and five were over eighty years of age. All, with two exceptions, were suffering from long-standing brain disease. One patient died from acute mania, and one from suicide by drowning. In the latter case the patient escaped while out exercising on the lawn; and, although diligent search was made as soon as his absence was noted, no trace of him could be found until four days afterwards, when his body was discovered floating in the lake. He was not regarded as actively suicidal; in fact, he was thought by his friends, who visited him on the forenoon of the day of his escape, to have recovered and to be in a condition to leave the hospital.

The insane hospitals of the State are to be congratulated upon the fact that they are soon to be relieved of the care and custody of that most trying and unsatisfactory class of inmates, the habitual drunkards, as the hospital for dipsomaniacs and inebriates is completed, and will no doubt be opened to receive patients within the next few weeks. Although my experience leads me to question whether the new institution will prove as successful in curing the disease or habit of inebriety as its more sanguine advocates anticipate, it will, I have no doubt, fill a very prominent and useful place among the charities of the Commonwealth. Certainly nothing could have been done more for the relief of the insane hospitals than the removal of this class of patients.

It now remains to provide separate accommodations for that most unfortunate but deserving class of dependents, the epileptics. Their condition appeals strongly to the sympathy of every one who is in any way brought in contact with them. They cannot be cared for properly in an insane hospital, as it is necessary for purposes of classification to scatter them about through the different wards, and it is impossible to give them, except at great cost, the attention which their condition demands. They need wards built with special reference to their malady, entirely separate from the insane, and so constructed that the patient can be constantly supervised both by day and night. Their presence in the hospitals acts unfavorably upon the other patients, and it is for the interest of all concerned that they be removed to an institution by themselves.

Besides keeping up the general repairs and repainting six of the male wards, we have made during the year extensive alterations in the dining-rooms on the female side of the house. Beginning with the Howe wards, we have put in china closets and closets with steam heat for drying towels; in place of the soap-stone sinks with wood casings, which have so long disfigured these rooms, we have introduced porcelain sinks with backs and tops of Tennessee marble. We have also added a steam table to each ward, relaid the floors and painted and decorated the ceilings. The plumbing, all of which was designed and set up by our resident plumber, is of the most approved pattern. The sinks stand out entirely open, supported upon brass legs, resting upon a marble slab, above which is a marble base. Special provisions have been made for ventilating the sinks and also the alcoves in which the steam tables are placed. The pipes connecting the sinks with the waste and with the hot and cold water are of brass, joined together throughout with brass unions, so that the whole can be readily got at and easily taken apart by the ordinary mechanic. The soil, water and steam pipes are run in a special shaft which extends from cellar to attic. This shaft can be entered from either floor, and is sufficiently large to admit of a person's getting into it and making all necessary repairs. It is the intention to carry out similar improvement in all of our dining-rooms as rapidly as our means will allow.

The plumbing throughout the hospital is in a very unsatisfactory condition, and needs thorough overhauling. The

closets, bath and wash rooms are badly placed, as they communicate directly with the wards, and, when the wind is in certain directions, ventilate into them; otherwise they are practically unventilated, are much out of repair and difficult to keep clean. The facilities for bathing, especially in the larger wards, are entirely inadequate, as the rooms devoted to this purpose are small, and contain but one bathtub which has to do service for from forty to sixty patients. When the lower wards are bathing it is impossible for those above to get water. It is difficult also to properly heat many of these bath-rooms. In my opinion it would neither be good policy nor economy to attempt to remodel these rooms, as they cannot be enlarged or made even fairly satisfactory, in a sanitary point of view, with any reasonable outlay. I would recommend, therefore, that the entire water section be abandoned for the purpose for which it is now used, and an annex sufficiently large to receive all the plumbing be thrown out at the rear of the Phillips, Washburn, Salisbury and Lincoln wards. The rooms thus vacated could be altered over without material expense into single rooms.

These additions could be built at a cost not exceeding twenty thousand dollars, and when completed would not only give us new and more satisfactory plumbing, but at the same time would provide for forty additional patients at the small outlay of five hundred dollars per patient.

I would recommend also that there be built near the cottage at present occupied by our farmer a house suitable for fifty patients working on the farm. Such patients need a certain amount of supervision but very little restraint, and would be more contented and much better provided for in a home by themselves, where they could be near their work, have their meals at more convenient hours, and sit down at a table better suited to the needs of persons engaged in active out-door employment. Such an arrangement would enable us to give our working force various privileges which it is now impossible to give them, and would act as an inducement for many to go out to work who are now disinclined to do so, and would, I have no doubt, be ultimately as much for the interest of the hospital as for the patients themselves.

The cost of such a building, to accommodate fifty patients and the necessary attendants, with plumbing, heating and kitchen arrangements complete (but exclusive of furnishings), would be twenty-five thousand dollars. Should this be built and our present water sections given up to patients, as proposed, it would increase our capacity by nearly one hundred, and greatly relieve our overcrowded wards.

Reference to the table showing the amount and value of the articles produced upon the farm and consumed at the hospital shows conclusively the material assistance in the way of income which the institution receives from this source. Under the skilful management of our farmer, Mr. Graves, its productiveness is yearly increasing.

The current expenses for the year, less the amount received for the articles sold, have been \$151,200.51; dividing this by 857.36, the daily average number of patients, gives \$176.35 as the annual cost of support, equivalent to a weekly cost of \$3.37.

The institution has received gifts of newspapers and periodicals from A. S. Lowell, and from their publishers the "Worcester Evening Gazette," "Worcester Daily Spy," "Fitchburg Sentinel" and "Salem Gazette."

I am happy to acknowledge my indebtedness to the officers and employees for their cheerful co-operation which has contributed so largely to the success of the institution during the past year and has materially lightened the burdens of the superintendent, and I would especially thank your Board for your cordial support and sympathy.

H. M. QUINBY,

Superintendent.

SEPT. 30, 1892.
